

### COMPACT DESIGN \*

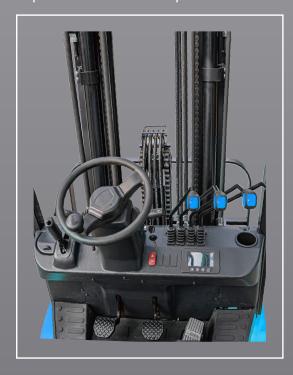

It adopts the classic exterior design of the N series Young Forklift. With its compact structure and small flexible design, it enables precise operations within confined spaces.

### HIGH \* PERFORMANCE

Implementation of a load-sensing steering system to further improve operational efficiency.

Integration of a high-angle cast steering axle to reduce the overall turning radius of the vehicle.

Equipped with standard SHIMADZU multi-way valves with load feedback, optionally equipped with OPS, ensuring reliable quality and stable performance.

#### SUPERIOR \* \* \* ERGONOMICS

Adoption of a suspended micro-motion braking mechanismand a submerged tilt cylinder layout to significantly increase foot space.

Incorporation of a large-radius structure for the overhead guard, expanding the driver's workspace.

Equipped with a high-power certified GK25 or HMC 2.4L engine, delivering powerful perfor mance.

Widening the gear transmission box to enhance durability and extend operational lifespan.

Equipped with a fully suspension seat to enhance comfort.

Multifunctional LCD instrument panel, offering comprehensive information display and real-time monitoring.

Utilizing the new narrow-groove steel mast to reduce the overall vehicle weight & enhance visibility.

Utilization of a small-diameter steering wheel, electro-hydraulic gearshift, and ratchet type hand-brake, greatly enhancing driving comfort.

## EASY \*\*\* MAINTENANCE

Increased hood opening angle provides a more Spacious working environment for inspection and maintenance tasks.

**Standard-equipped with swing down LPG tank bracket**, alloqing foreasy replacement of the fuel tank.

**Detachable left and right guard plates** for convenient maintanance.

**Easy check on transmission oil filter** from small cover on the foot plate.

### SAFETY & \*\*\*\*\* RELIABILITY

Aluminum fin-type radiator improves heat dissipation, ensuring engine performance.

Optimization of key structural components a such as the chassis, mast, overhead guard, and steering axle to enhance overall vehicle safety and reliability.

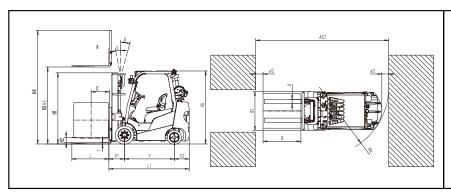

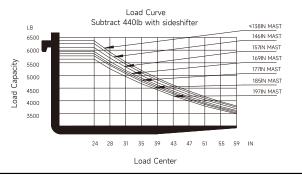

# ENERGY EFFICIENCY & ENVIRONMENTAL FRIENDLY \*\*\*\*\*

Implementation of an optimized hydraulic system underscores energy efficiency, reducing overall fuel consumption.

Engine emissions comply with the latest EPA/CARB regulations in the United States.
